Enhancing Needs-Based Segmentation: *Using Text Data Mining Framework for Attribute Discovery and Validation.* *An application in the field of Destination Branding.*

Thesis Defense for the Master's Degree in Data Science for Economics

Presented by: **Franco Reinaldo BONIFACINI**

Supervisor: Prof. Massimo
ALIBERTI

Co-Supervisor: Prof. Stefano
MONTANELLI

December 2025

UNIVERSITÀ
DEGLI STUDI
DI MILANO

The background of the slide is a composite image. On the left, there is a photograph of a tall, square stone tower with a triangular pediment and three arched windows on the upper level. A path leads through an arched opening at the base of the tower. To the right of the tower is a large, dense green tree. On the right side of the slide, there is a semi-transparent blue rectangular area. Inside this area, the text 'MOTIVATION & RESEARCH QUESTION' is written in large, white, bold, sans-serif capital letters. Behind the text, a faint image of a church with a tall spire is visible, set against a blue sky with white clouds.

MOTIVATION & RESEARCH QUESTION

THE PROBLEM

- ✓ As highlighted by Dibb & Simkin (2001), needs-based segmentation is highly dependent on the **quality and structure of the attributes** used.
- ✓ Cluster validation metrics showed **inconsistent indications**, suggesting that the underlying attributes were sub-optimal for producing stable and meaningful segments.
- ✓ The segmentation relied on K-means, a method not well suited for ordinal rankings, further contributing to instability.

Question

*“How should a **research framework** be structured in order to produce **reliable and actionable insights** for tourism marketing, based on the identification and evaluation of **relevant attributes** of tourist behaviour?”*

Objective

Design, implement, and test a **methodological framework** that combines **text mining with qualitative exploration and quantitative validation** into a single, coherent process.

PREVIOUS WORK

Main Limitations

Main Limitations

Qualitative interviews

- × Limited Questions.
- × Lack of genuine responses.
- × No recordings.

Main Limitations

Set of Attributes

- × Too general attributes.
- × Ambiguity.

Previous Work Attributes
Accessibility/Public Transportation
Accessible Prices
Accommodation availability
Food
Historical background
Local events
Landscape
Availability of tourists' packs

Main Limitations

Quantitative survey

- × Small sample.
- × Avoidable questions.

Main Limitations

Language

- × Only English.
- × No native language.

Manual identification of attributes

Notes:

Interview 1 (Male, Italian, 24 years)

- Some important points, and insights:
 - "...look for ideas from other itineraries...". **ONLINE RECOMMENDATION**
 - "...it also depends on price, how to get there, if I can go by public transport or not, or if I can drive there...". **COST TO REACH, ACCESSIBILITY BY PUBLIC TRANSPORT**

Attributes:

#	Attribute	Frequency	#	Attribute	Frequency
1	accommodation type	9	23	overcrowded	3
2	online recommendations	9	24	restaurants availability	3
3	proximity to other destinations	9	25	accessible by public transport	2
4	local cuisine	8	26	accommodation quality	2
5	accessibility to touristic points	7	27	city's accessibility	2
6	cost to reach	7	28	genuine online recommendations	2
7	accommodation price	6	29	hiking trails	2
8	distance to reach	6	30	local friendliness	2
9	historical buildings	6	31	popular city	2
10	local events	6	32	variety of hours for transportation	2
11	accommodation services	5	33	access to mountains	1
12	availability of transport to destination	5	34	attraction availability	1
13	cultural immersion	5	35	availability of city tours	1
14	food's price	5	36	availability of travel agencies	1
15	proximity to popular cities	5	37	car friendly	1
16	accommodation location	4	38	destination size	1
17	historical places	4	39	events price	1

Original Output:

Attribute (English)	Frequency	Interviews where mentioned
Local food / gastronomy	10	1, 2, 3, 4, 5, 6, 7, 8, 9, 10
Architecture / historical buildings	9	1, 2, 3, 4, 5, 6, 7, 9, 10
Museums / art exhibitions	7	1, 2, 4, 6, 8, 9, 10
Cultural festivals / events	7	1, 4, 5, 6, 7, 8, 10
City atmosphere / vibe / livability	6	1, 2, 3, 6, 7, 8
Traditional restaurants / family-run eateries	6	3, 4, 6, 7, 9, 10
Historic centers / old towns	5	2, 4, 5, 9, 10
Local people friendliness / hospitality	5	3, 4, 6, 7, 10
Cleanliness of the city	4	3, 4, 6, 7
Artistic heritage / Renaissance art	4	2, 5, 8, 10
Squares / piazzas / public spaces	4	4, 7, 8, 10
Natural landscapes / vegetation / parks	3	4, 6, 7
Religious sites (churches, convents)	3	2, 6, 10
Guided tours / city tours	3	1, 5, 9
Nightlife / music festivals	3	1, 5, 8
Traditional markets / local markets	2	5, 8
Local crafts / authenticity / non-commercial atmosphere	2	4, 7
Street food / casual local food	2	9, 10
Festivals or parades (La Quintana)	2	8, 10
Scenic views / viewpoints / aesthetic beauty	2	6, 7

Refined Output:

Attribute
Quality of local cuisine
Presence of heritage architecture
Ambience of the historic center
Availability of museums and art venues
Frequency of cultural events
Quality of natural scenery
Friendliness of local residents
Cleanliness and orderliness of the city
Authenticity of local experience
Availability of guided tours and information on-site
Attractiveness of main squares and public spaces
Ease of access from other destinations
Cost and comfort of transport connections
Quality of accommodation options
Usefulness of online information
Scale and diversity of attractions
Affordability of the destination
Availability of visitor services

Results

Preliminary Set of Ten Attributes

Attribute
Distinctive local cuisine
Heritage ambience of the historic center
Availability of museums and art venues
Frequency of cultural events
Proximity to natural areas
Ease of reaching the city by public transport
Digital information availability
Accommodation type
Quality of accommodation options
Accessibility to touristic points

Methodology

	Original Dataset	Optimization	Transformation	Frequency
	7,141,844	✓ Until upper quartile (75%) ✓ Cld2 detector → Only English (2,800,779) ✓ 15% sample	✓ Tokenization ✓ Lowercase ✓ Removal of stopwords and punctuation ✓ Lemmatization	✓ Unigrams ✓ Trigrams
	18,988	✓ Removal of "There are no comments available for this review"	✓ Tokenization ✓ Lowercase ✓ Removal of stopwords and punctuation ✓ Lemmatization	✓ Split into positive and negative reviews ✓ Unigrams ✓ Trigrams

	Density of attractions within walking distance
	Low tourist density

Methodology

Open-ended questions

PAST TRIPS

1. Tell us about a trip of yours that you were not satisfied with. What would you not do again, especially in the planning phase? (**OPEN-ENDED QUESTION**)

2. Which trip or vacation best represents your way of choosing how to travel? Tell us about the destination: how you chose it, why it reflects you, etc. (**OPEN-ENDED QUESTION**)

Decision-making steps

ORGANIZING A VACATION

3. Imagine organizing a vacation. Sketch a short story of your choice: what would be the 3–4 main scenes?

a. Scene 1 (**OPEN-ENDED QUESTION**)

b. Scene 2 (**OPEN-ENDED QUESTION**)

c. Scene 3 (**OPEN-ENDED QUESTION**)

d. Scene 4 (Optional) (**OPEN-ENDED QUESTION**)

MULTIPLE CHOICE

4. Which of these stories represents you the most?

a. I see an offer, check very little, and book the same day.

b. I compare 3–4 destinations, read reviews, and book after a few days.

c. I check flexibility/free cancellation and decide when I find the right one.

d. Others.

Questions were presented in English and Spanish

Complementary analysis with LLM

Results

New Takeaways

- ✓ Trips in which they visited **multiple destinations**, most often in Europe, a continent that enables visiting several cities within a single trip.
- ✓ Importance of **free-cancellation** for accommodations.
- ✓ Get informed from **reliable sources**, such as experienced travellers, review sites, and travel forums.
- ✓ Balance between **booking in advance** and leaving room for **spontaneous activities**.
- ✓ **Book tours** to get to know the city better.

Option A			Option B		
	bigram	tfidf		bigram	tfidf

DI MILANO

An aerial photograph of a historic building with a prominent circular tower and a tiled roof, situated next to a large stone bridge with multiple arches. The scene is surrounded by lush green trees and urban buildings in the background. A semi-transparent blue rectangle is overlaid on the right side of the image, containing the title text.

LIMITATION & FUTURE WORK

Limitations:

- ✓ Final survey did not reach a **broader audience**.
- ✓ Missing some socio-demographic **variables**.

Limitations:

- ✓ Final survey did not reach a **broader audience**.
- ✓ Missing some socio-demographic **variables**.

Future work:

- ✓ Expanding **text sources** and collecting **multi-language responses**.
- ✓ Additional rounds of **qualitative** or **open-ended surveys**.
- ✓ Applying **latent-class** or **hierarchical models** → Deeper heterogeneity between tourist groups.
- ✓ Conducting a **conjoint** or **discrete-choice** experiment.
- ✓ Recommended to:
 - Adapting **behavioural questions** to destination-specific contexts.
 - **Predictive models** that focus directly on destination outcomes.

UNIVERSITÀ
DEGLI STUDI
DI MILANO

CONCLUSION

- ✓ The proposed methodological framework appears promising in terms of **effectiveness and reliability**.
 - The interview process was redesigned to **reduce bias and improve reliability**.
 - The combination of qualitative interviews and automated text-based techniques **reduced subjectivity** and allowed the detection of **meaningful patterns**, previously not identified by a team of X analysts during the first attempted market research (PW).
 - The quantitative stage incorporated more **robust analytical tools**.
 - The final attributes showed **strong discriminant power** and **consistency**.
- ✓ **Contribution:**
 - **Strengthens** the early stages of attribute discovery.
 - Mixed methods can **improve** segmentation quality.
 - Offers **practical implications**.

THANK YOU!

ANNEX

Prompt used:

I'm going to send you several text files. I want you to read them carefully and then give me a detailed analysis that includes:

- *A list of specific tourism attributes (in English) found in each interview (not general ones like price or accommodation).*
- *The frequency of each attribute (across a total of 10 interviews).*
- *A table showing the attributes in English, their frequency, and which interviews they appear in.*

When I send you the files, confirm that you've read them, and then start the analysis. Don't write anything until I confirm that I've sent all the files.

Refinement prompt:

Continuing with this, it's important to understand that sometimes an attribute can be ambiguous for different respondents. For example, if I include "Historical architecture & monuments," it's not clear whether it refers to the availability of monuments, the presence of a historic center, etc.

That's why I need you to conclude with more detailed, clearly defined attributes that avoid ambiguity and don't overlap with other attributes.

Algorithm 1 Lemmatizing Reviews

Input: Data frame *airbnb_reviews_sample* with column *clean_tokens*

- 1: Initialize empty list *lemma_token_list* $\leftarrow []$
- 2: Create list *texts* $\leftarrow$ join tokens in *airbnb_reviews_sample[clean_tokens]* with spaces
- 3: **for** each *doc* in NLP pipeline applied to *texts* with batch size 2000 and *n_process* = 4 **do**
- 4: Extract *lemmas* $\leftarrow$ list of *token.lemma_* for each *token* in *doc*
- 5: Exclude tokens that are punctuation or spaces
- 6: Append *lemmas* to *lemma_token_list*
- 7: **end for**

Output: List *lemma_token_list* containing lemmatized tokens for each review

Algorithm 2 Computing TF-IDF Vectors

Input: List of documents *doc*

- 1: ▷ — Compute TF-IDF for unigrams —
- 2: Initialize *vectorizer_unigrams* $\leftarrow$ *TfidfVectorizer* with parameters:
 - *lowercase* = False
 - *token_pattern* = *r"(?u)\b\w+\b"*
 - *ngram_range* = (1,1)
 - *min_df* = 5, *max_df* = 0.8
 - *max_features* = 100,000
 - *dtype* = float32
- 3: *X_unigrams* $\leftarrow$ *vectorizer_unigrams* fit-transform on *doc*
- 4: *terms_unigrams* $\leftarrow$ *vectorizer_unigrams.get_feature_names_out()* ▷ —
Compute TF-IDF for trigrams —
- 5: Initialize *vectorizer_trigrams* $\leftarrow$ same parameters as above, but with *ngram_range* = (3,3)
- 6: *X_trigrams* $\leftarrow$ *vectorizer_trigrams.fit_transform(doc)*
- 7: *terms_trigrams* $\leftarrow$ *vectorizer_trigrams.get_feature_names_out()*

Output: TF-IDF matrices *X_unigrams* and *X_trigrams*, and their corresponding term lists

Results

Attribute	Observation
Centrally located accommodations.	Already in previous attributes
Accommodation within walking distance to key attractions.	Already in previous attributes
Accommodation's high quality (4/5 stars).	Already in previous attributes
Flexible booking options (free cancellation, easy date change).	Already in previous attributes
Accommodation near daily essentials (supermarket, pharmacy, ATM).	Already in previous attributes
Accommodation services (24h check-in or digital self check-in).	Already in previous attributes
Availability of authentic local restaurants with regional dishes.	Already in previous attributes
Restaurants with online or advance booking.	This is interesting, but should check if is relevant to include, taking into account that I already have something about restaruants.
Availability of local food markets/craft fairs.	Interesting, also saw this, but not mentioned by many tourists previously.
Availability of traditional, family-run restaurants.	This is also interesting, but again, related to local cuisine.
Possibility of cultural immersion (local rituals, traditions, or workshops).	Already in previous attributes
Availability of guided tours in different languages.	Clearly there is something about this matter, although was not frequent, with this approaches I reinforced the need of providing pre-fix activities so tourists avoid over-planning or FOMO (fearing not seeing something important)
Ready-made travel packages (include key attractions).	Can be combined with previous case
Local festivals.	Already in previous attributes and as mentioned before, this is stational
Walkable historic districts.	Can be related to walking distance of accommodation and attractions.
Diversity of small local shops/artisans.	Related to other attributes already mentioned.
Availability of hiking/trekking routes.	Already in previous attributes
Proximity to other cities/villages.	Already in previous attributes
Proximity to natural areas.	Already in previous attributes
Ease of reaching the city by public transport.	Already in previous attributes
Availability of car rentals.	Already in previous attributes
Touristic sites reachable on foot.	Already in previous attributes
Availabilkity of luggage storage near stations or airports.	This is really interesting attribute, yet it was not mentioned too much, and other attributes are more representative.
